Bicol Peaks — ReactJS Homepage Implementation

ITELEC3 – Web Systems and Technologies | CBSUA ReactJS Activity

1. Project Overview

The Bicol Peaks homepage introduces the mountains, volcanoes, and natural landscapes of the Bicol Region. The homepage has been implemented using ReactJS with Vite while preserving its original purpose, branding, content, layout, colors, typography, images, and navigation.

2. React Components

App.jsx: Main homepage component. It manages the theme and mobile navigation state and brings the page sections together.

Header.jsx: Reusable navigation header. It receives theme and menu values and event handlers through props.

HeroCarousel.jsx: Displays the homepage image carousel. React state controls the active slide, while previous and next buttons change the slide.

DestinationCard.jsx: Reusable featured destination card. It receives destination information through a prop.

Footer.jsx: Displays the website description and navigation links.

destinations.js: Exports the existing province and destination data for use in React.

3. Interactive Features

1. Mobile navigation toggle — opens and closes the navigation menu using React state. The Escape key also closes the menu.

2. Theme toggle — switches between light and dark themes using React state and saves the selected preference in localStorage.

3. Hero carousel — previous and next buttons change the active image. The carousel also advances automatically.

4. Responsive Design and Setup

The homepage retains responsive Tailwind utility classes for mobile, tablet, and desktop layouts. The project uses Vite for development and production builds.

Run: npm install
Start: npm run dev
Build: npm run build

5. Screenshots (to be inserted by the student)

The activity submission requires screenshots of the original homepage and the ReactJS implementation. Capture both pages in a browser and place the images in the spaces below. Screenshots are not fabricated or included because a live browser capture was not available during file preparation.
